

PRODUCTION & DISPATCH PLANNING

Definition	<i>This competency may be defined as that combination of knowledge and skills required for the purpose of planning, coordinating and ensuring production and dispatch of various products, so as to meet customer/market requirements</i>
------------	---

Level Descriptions

Level 1 Awareness	Level 2 Operational	Level 3 Developed	Level 4 Expert
<ul style="list-style-type: none"> ➤ Is aware of the annual plan of the company in terms of production as well as marketing Is [REDACTED] [REDACTED] ➤ [REDACTED] the production of various products (consumption coefficients), lead times of procurements of key raw materials etc. ➤ Is aware of the annual plan of the company in terms of production as well as marketing ➤ Is aware of the production sequencing 	<ul style="list-style-type: none"> [REDACTED] ➤ Has a thorough understanding of the various product lines – equipments used, capacities of the equipment, process times involved, batch sizes, throughput of the lines, etc ➤ Can carry out raw material planning taking into consideration all relevant information including material in stock, material in pipe line, WIP, change (if any) in consumption coefficients, lead times, reorder levels substitute material etc. [REDACTED] 	<ul style="list-style-type: none"> ➤ Can make or contribute to the development of annual production and/or business plan, based on extensive knowledge of the current /historical data [REDACTED] Based on historical patterns and data can establish more robust planning modules which will help in meeting market demands (demand management) more effectively [REDACTED] 	<ul style="list-style-type: none"> ➤ Can establish enterprise wide models for production planning and control which shall ensure optimal utilization of internal resources, leverage on contract manufacturing network of the organization, increase throughputs and markets shares, while addressing cost, quality and customer needs [REDACTED] [REDACTED]

<p>process for the various products manufactured and the process times involved</p> <p>Is aware of the interlinkages between production planning, material planning,</p> <p>Is aware of the basics of demand planning and the variations associated with the demand planning process</p> <p>Has a broad understanding of SAP MM and Production modules</p>	<p>Is fully conversant with the various issues and constraints to be taken into consideration when drawing up the dispatch plan – material handling (loading/unloading), times taken, costs involved, customer satisfaction, etc.</p> <p>Has a broad understanding of palletization and how it impacts the dispatching planning and cost dimensions</p> <p>Is fully conversant with various features of SAP PP and MM module and can use the same for optimization (optimizer), increased delivery responsiveness, reduced inventory etc.</p>	<p>Can develop heuristics for various commonly occurring demand scenario so to reduce the lead time between planning and execution</p> <p>Can work with other players in the supply chain such as outsourcing vendors (operations which have been outsourced) and suppliers in finetuning and ensuring a more effective PPC</p> <p>Can detect and resolve issues pertaining to PPC in real time and at minimal costs</p> <p>Can work with material movement /logisticsts vendor to ensure better delivery, lower inventories (in transit), higher responsiveness and reduced costs</p>
